PROJECTS

Food Bridge | React.js, Node.js, Express.js, MongoDB

Jun'26

- Designed and developed a full-stack food donation platform end-to-end from database schema to React.js frontend connecting donors and recipients to reduce food waste.
- Designed and integrated RESTful APIs using Node.js and Express.js, with a MongoDB schema built for efficient, optimized data access.
- Implemented interactive map and location-based features to display donation locations and help users identify nearby donations.

IP Quest | HTML5, CSS, JavaScript, REST APIs

Mar'26

- Built a responsive front-end web application using HTML5, CSS, and JavaScript to display IP geolocation, ISP, time zone, and network information.
- Integrated external REST APIs to fetch and present real-time data with clean, maintainable front-end code.

Disk Scheduling Simulator | Python

Nov'26

- Built an interactive simulator for FCFS, SSTF, SCAN, and C-SCAN disk scheduling algorithms, applying strong analytical and algorithmic problem-solving skills.
- Visualized disk head movement and compared algorithm performance using seek time calculations.

CERTIFICATIONS

- Database Management System - Oracle
- MERN Stack with AI
